

## Cat 6500 & WiSM – questions

1. Upgrade IOS of Cat6500 in order to support the WiSM blade
2. Configure the Service Interfaces of both controllers of the WiSM blade (use VLAN 11 = 10.11.11.x/24)  
Use the following methods to achieve your goal and eventually configure the interfaces statically:
  - Dynamic (it does not matter what IP address WLC1 and WLC2 will get)
  - Dynamic with exclusions (WLC1 = 10.11.11.10, WLC2 = 10.11.11.11)
  - Dynamic with MAC reservations (WLC1 = 10.11.11.20, WLC2 = 10.11.11.21)
  - Static (WLC1 = 10.11.11.30, WLC2 = 10.11.11.31)
3. Access WLC1 and WLC2 without using telnet, SSH or a console connection.
4. Configure AutoLAG and explain why we cannot use normal LAG between Cat6500 and the WiSM blade. Make sure Layer 3 traffic is trusted. Also explain how we can trust Layer 2 traffic.
5. Configure load balancing for load balancing based on best practices
6. Create a Management VLAN for the WiSM blade on the Cat 6500 (VLAN 21 = 10.11.21.x/24) and do an initial configuration on WLC1 & WLC2.  
Use the following IP addresses:  
SVI interface = 10.11.21.254/24  
WLC1 management interface = 10.11.21.10/24  
WLC1 AP-manager interface = 10.11.21.11/24  
WLC1 management interface = 10.11.21.20/24  
WLC1 AP-manager interface = 10.11.21.21/24  
Configure these IP addresses with the initial config setup on both WLC's.  
Make sure how to change this IP address after the initial config is done
7. Make sure that the traffic that is coming from WLC1 and WLC2 is arriving in a untagged form but stills travels trough the Management VLAN (21)
8. Reset the WiSM blade independently from the Cat6500 switch

## Cat 6500 & WiSM – solutions

### 1. Upgrade IOS of Cat6500 in order to support the WiSM blade

#### Configuration:

First we check what the current IOS version is on the Cat 65XX:

```
Router#sh ver
Cisco Internetwork Operating System Software
IOS (tm) s72033_rp Software (s72033_rp-PK9SV-M), Version 12.2(17d)SXB11a, RELEASE
SOFTWARE (fcl)

agree to comply with applicable laws and regulations. If you are unable
to comply with U.S. and local laws, return this product immediately.

A summary of U.S. laws governing Cisco cryptographic products may be found at:
http://www.cisco.com/wvl/export/crypto/tool/stqrg.html

If you require further assistance please contact us by sending email to
export@cisco.com.

cisco WS-C6506-E (R7000) processor (revision 1.1) with 458752K/65536K bytes of memory.
Processor board ID SAL1052CJQA
SR71000 CPU at 600Mhz, Implementation 0x504, Rev 1.2, 512KB L2 Cache
Last reset from power-on
X.25 software, Version 3.0.0.
Bridging software.
1 Virtual Ethernet/IEEE 802.3 interface(s)
48 FastEthernet/IEEE 802.3 interface(s)
2 Gigabit Ethernet/IEEE 802.3 interface(s)
1917K bytes of non-volatile configuration memory.
8192K bytes of packet buffer memory.

65536K bytes of Flash internal SIMM (Sector size 512K).
Configuration register is 0x2102
```

We see that the IOS version is currently on the Catalyst 6506 is *"Version 12.2(17d)SXB11a"*

This version is not supporting the WiSM blade at all.

We can verify that with checking the status of the WiSM blade.

```

```

As you can see the WiSM module is located in the first slot and is currently Powered Down.

Let's see what happens if we try to power it up:

```
Router(config)#power enable module 1

1d10h: %C6KPWR-SP-4-UNSUPPORTED: unsupported module in slot 1, power not allowed:
Unknown Card Type.
```

When the IOS is not the correct IOS it will generate this message when trying to power the module up.

So the only thing that is left is that we need to download a new version IOS from CCO. To save some time there was a newer version on Disk0: on the Catalyst 6500.

```
Router#show file systems
```

```

Router#

```

2. Configure the Service Interfaces of both controllers of the WiSM blade (use VLAN 11 = 10.11.11.x/24)

Use the following methods to achieve your goal and eventually configure the interfaces statically:

- 1) Dynamic (it does not matter what IP address WLC1 and WLC2 will get)
- 2) Dynamic with exclusions (WLC1 = 10.11.11.10, WLC2 = 10.11.11.11)
- 3) Dynamic with MAC reservations (WLC1 = 10.11.11.20, WLC2 = 10.11.11.21)
- 4) Static (WLC1 = 10.11.11.30, WLC2 = 10.11.11.31)

First we need to create the service interface VLAN.  
We check what VLANS are there at the moment:

```
CAT6500#show vlan
```

VLAN Name	Status	Ports
1 default	active	Gi1/1, Gi1/2, Gi1/3, Gi1/4 Gi1/5, Gi1/6, Gi1/7, Gi1/8 Gi1/9, Gi1/10
1002 fddi-default	act/unsup	
1003 token-ring-default	act/unsup	
1004 fddinet-default	act/unsup	
1005 trnet-default	act/unsup	

  

VLAN	Type	SAID	MTU	Parent	RingNo	BridgeNo	Stp	BrdgMode	Trans1	Trans2
1	enet	100001	1500	-	-	-	-	-	0	0
1002	fddi	101002	1500	-	-	-	-	-	0	0
1003	tr	101003	1500	-	-	-	-	-	0	0
1004	fdnet	101004	1500	-	-	-	ieee	-	0	0
1005	trnet	101005	1500	-	-	-	ibm	-	0	0

Now we create the service VLAN:

```
CAT6500#conf t
Enter configuration commands, one per line. End with CNTL/Z.
CAT6500(config)#vlan 11
CAT6500(config-vlan)#name WISMSERVICE
CAT6500(config-vlan)#exit
% Applying VLAN changes may take few minutes. Please wait...

CAT6500(config)#exit

00:04:44: %SYS-5-CONFIG_I: Configured from console by console
```

And verify it it's created:

```
CAT6500#sh vlan
```

VLAN Name	Status	Ports
1 default	active	Gi1/1, Gi1/2, Gi1/3, Gi1/4 Gi1/5, Gi1/6, Gi1/7, Gi1/8 Gi1/9, Gi1/10
<b>11 WISMSERVICE</b>	<b>active</b>	
1002 fddi-default	act/unsup	
1003 token-ring-default	act/unsup	
1004 fddinet-default	act/unsup	
1005 trnet-default	act/unsup	

  

VLAN	Type	SAID	MTU	Parent	RingNo	BridgeNo	Stp	BrdgMode	Trans1	Trans2
1	enet	100001	1500	-	-	-	-	-	0	0
11	enet	100011	1500	-	-	-	-	-	0	0
1002	fddi	101002	1500	-	-	-	-	-	0	0
1003	tr	101003	1500	-	-	-	-	-	0	0

1004	fdnet	101004	1500	-	-	-	ieee	-	0	0
1005	trnet	101005	1500	-	-	-	ibm	-	0	0

Enable the service interface on the WiSM:

```
CAT6500#conf t
Enter configuration commands, one per line. End with CNTL/Z.
CAT6500(config)#wism service-vlan 11
```

Check the IP addresses on the service VLAN and the port status:

```
CAT6500#show wism status

Service Vlan : 11, Service IP Subnet : Not Configured
WLAN
Slot  Controller  Service IP      Management IP    SW Version  Status
-----+-----+-----+-----+-----+-----
1      1              0.0.0.0         0.0.0.0         4.2.207.0   Service Port Down
1      2              0.0.0.0         0.0.0.0         4.2.207.0   Service Port Down
```

Create SVI for the service interfaces on the Cat 6500:

```
CAT6500(config)#int vlan 11
CAT6500(config-if)#ip address 10.11.11.254 255.255.255.0
CAT6500(config-if)#no shut
```

Verify if the service interfaces are up:

```
CAT6500#show wism status

Service Vlan : 11, Service IP Subnet : 10.11.11.254/255.255.255.0
WLAN
Slot  Controller  Service IP      Management IP    SW Version  Status
-----+-----+-----+-----+-----+-----
1      1              0.0.0.0         0.0.0.0         4.2.207.0   Service Port Up
1      2              0.0.0.0         0.0.0.0         4.2.207.0   Service Port Up
```

1) Dynamic (it does not matter what IP address WLC1 and WLC2 will get)

First we create a DHCP pool:

```
CAT6500(config)#ip dhcp pool WiSM
CAT6500(config-dhcp)#name WISMSERVICE
CAT6500(config-dhcp)#network 10.11.11.0 /24
CAT6500(config-dhcp)#default-router 10.11.11.254
```

Check the IP addresses of the service interfaces again:

```
CAT6500#show wism status

Service Vlan : 11, Service IP Subnet : 10.11.11.254/255.255.255.0
WLAN
Slot  Controller  Service IP      Management IP    SW Version  Status
-----+-----+-----+-----+-----+-----
1      1              10.11.11.1      169.254.1.1     4.2.207.0   Oper-Up
1      2              10.11.11.2      169.254.1.1     4.2.207.0   Oper-Up

CAT6500#
00:19:23: %WiSM-5-STATE: Controller 1 in slot 1 is Oper-Up
00:19:23: %WiSM-5-STATE: Controller 2 in slot 1 is Oper-Up
CAT6500#
```

## 2) Dynamic with exclusions (WLC1 = 10.11.11.10, WLC2 = 10.11.11.11)

The DHCP scope is already created so we only include exclusions:

```
CAT6500(config)#ip dhcp excluded-address 10.11.11.1 10.11.11.9
CAT6500(config)#ip dhcp excluded-address 10.11.11.12 10.11.11.254

CAT6500#hw-module module 1 reset
Proceed with reload of module?[confirm]
% reset issued for module 1
CAT6500#
00:24:58: %C6KPWR-SP-4-DISABLED: power to module in slot 1 set off (Reset)
```

Check the IP addresses again after the reload:

```
CAT6500#show wism status

Service Vlan : 11, Service IP Subnet : 10.11.11.254/255.255.255.0
WLAN
Slot Controller Service IP Management IP SW Version Status
-----+-----+-----+-----+-----+-----
1 1 10.11.11.10 169.254.1.1 4.2.207.0 Oper-Up
1 2 10.11.11.11 169.254.1.1 4.2.207.0 Oper-Up
```

## 3) Dynamic with MAC reservations (WLC1 = 10.11.11.20, WLC2 = 10.11.11.21)

In order to know what the MAC addresses are of the WLC service interfaces. So we do the initial config of the WLC's first:

```
Welcome to the Cisco Wizard Configuration Tool
Use the '-' character to backup
System Name [Cisco_0a:45:ab]: WLC1
Enter Administrative User Name (24 characters max): admin
Enter Administrative Password (24 characters max): *****
Re-enter Administrative Password : *****

Service Interface IP Address Configuration [none][DHCP]:

Management Interface IP Address: 10.11.21.10
Management Interface Netmask: 255.255.255.0
Management Interface Default Router: 10.11.21.254
Management Interface VLAN Identifier (0 = untagged): 21
Management Interface DHCP Server IP Address: 10.11.21.254

AP Transport Mode [layer2][LAYER3]:
AP Manager Interface IP Address: 10.11.21.11

AP-Manager is on Management subnet, using same values
AP Manager Interface DHCP Server (10.11.21.254):

Virtual Gateway IP Address: 1.1.1.1

Mobility/RF Group Name: WiSM-WLC1

Enable Symmetric Mobility Tunneling [yes][NO]:

Network Name (SSID): WiSM-WLC1
Allow Static IP Addresses [YES][no]:

Configure a RADIUS Server now? [YES][no]: no
Warning! The default WLAN security policy requires a RADIUS server.
Please see documentation for more details.

Enter Country Code list (enter 'help' for a list of countries) [US]:

Enable 802.11b Network [YES][no]:
Enable 802.11a Network [YES][no]:
Enable 802.11g Network [YES][no]:
```

```
Enable Auto-RF [YES][no]:

Configure a NTP server now? [YES][no]: no
Configure the system time now? [YES][no]: no

Warning! No AP will come up unless the time is set.
Please see documentation for more details.

Configuration correct? If yes, system will save it and reset. [yes][NO]: yes

Starting LOCP: ok
Starting CIDS Services: ok
Starting Ethernet-over-IP: ok
Starting Management Services:
  Web Server: ok
  CLI: ok
  Secure Web: ok

(WiSM-slot1-2)

Enter User Name (or 'Recover-Config' this one-time only to reset configuration to
factory defaults)

User: admin
Password:*****

```

Check out the MAC address of WLC2:

```

(WiSM-slot1-2) >show interface detailed service-port

Interface Name..... service-port
MAC Address..... 00:26:cb:0b:77:e2
IP Address..... 0.0.0.0
DHCP Option 82..... Disabled
DHCP Protocol..... Enabled
AP Manager..... No
Guest Interface..... No

```

Delete the DHCP scope we just created and create 2 new scopes (for each WLC):

```

CAT6500(config)#ip dhcp pool WLC1
CAT6500(dhcp-config)#host 10.11.11.20 255.255.255.0
CAT6500(dhcp-config)#hardware-address 0026.cb0a.45a2
CAT6500(dhcp-config)#exit
CAT6500(config)#ip dhcp pool WLC2
CAT6500(dhcp-config)#host 10.11.11.21 255.255.255.0
CAT6500(dhcp-config)#hardware-address 0026.cb0b.77e2

00:44:06: %WiSM-5-STATE: Controller 1 in slot 1 is Oper-Up
00:44:21: %WiSM-5-STATE: Controller 2 in slot 1 is Oper-Up

```

Check the IP addresses again of the service interfaces:

```

CAT6500#show wism status

Service Vlan : 11, Service IP Subnet : 10.11.11.254/255.255.255.0
WLAN
Slot  Controller  Service IP      Management IP   SW Version     Status
-----+-----+-----+-----+-----+-----
1      1              10.11.11.20    10.11.21.10    4.2.207.0     Oper-Up
1      2              10.11.11.21    10.11.21.20    4.2.207.0     Oper-Up

```

4) Static (WLC1 = 10.11.11.30, WLC2 = 10.11.11.31)

Disable all the DHCP pools:

```
CAT6500(config)#no ip dhcp pool WLC1
CAT6500(config)#no ip dhcp pool WLC2
```

Set the interfaces in the controller to static and set the IP address manual:

```
(WiSM-slot1-1) >config interface address service-port 10.11.11.30 255.255.255.0
The DHCP protocol for the service port must be disabled before configuring the IP addr

(WiSM-slot1-1) >config interface dhcp service-port disable

(WiSM-slot1-1) >config interface address service-port 10.11.11.30 255.255.255.0
```

Verify it:

```
(WiSM-slot1-1) >show interface summary
```

Interface Name	Port	Vlan Id	IP Address	Type	Ap Mgr	Guest
ap-manager	LAG	21	10.11.21.11	Static	Yes	No
management	LAG	21	10.11.21.10	Static	No	No
service-port	N/A	N/A	<b>10.11.11.30</b>	Static	No	No
virtual	N/A	N/A	1.1.1.1	Static	No	No

Do the same for WLC2:

```
(WiSM-slot1-2) >config interface address service-port 10.11.11.31 255.255.255.0
The DHCP protocol for the service port must be disabled before configuring the IP addr

(WiSM-slot1-2) >config interface dhcp service-port disable

(WiSM-slot1-2) >config interface address service-port 10.11.11.31 255.255.255.0

(WiSM-slot1-2) >show interface summary
```

Interface Name	Port	Vlan Id	IP Address	Type	Ap Mgr	Guest
ap-manager	LAG	21	10.11.21.21	Static	Yes	No
management	LAG	21	10.11.21.20	Static	No	No
service-port	N/A	N/A	<b>10.11.11.31</b>	Static	No	No
virtual	N/A	N/A	1.1.1.1	Static	No	No

3. Access WLC1 and WLC2 without using telnet, SSH or a console connection.

```
CAT6500#session slot 1 processor 1
```

```
The default escape character is Ctrl-^, then x.
You can also type 'exit' at the remote prompt to end the session
Trying 10.11.11.30 ... Open
```

```
(WiSM-slot1-1)
User:
```

```
CAT6500#session slot 1 processor 2
```

```
The default escape character is Ctrl-^, then x.
You can also type 'exit' at the remote prompt to end the session
Trying 10.11.11.31 ... Open
```

```
(WiSM-slot1-2)
User:
```

```
CAT6500#show session
```

```
Conn Host          Address           Byte  Idle Conn Name
  1 10.11.11.30      10.11.11.30      0     0 10.11.11.30
*  2 10.11.11.31      10.11.11.31      0     0 10.11.11.31
```

```
CAT6500#
```

```
CAT6500#disc 1
```

```
Closing connection to 10.11.11.30 [confirm]
```

```
CAT6500#disc 2
```

```
Closing connection to 10.11.11.31 [confirm]
```

```
CAT6500#show sessions
```

```
% No connections open
```

```
CAT6500#
```

4. Configure AutoLAG and explain why we cannot use normal LAG between Cat6500 and the WiSM blade. Make sure Layer 3 traffic is trusted. Also explain how we can trust Layer 2 traffic.

Create the management VLAN:

```
CAT6500#conf t
```

```
Enter configuration commands, one per line. End with CNTL/Z.
```

```
CAT6500(config)#vlan 21
```

```
CAT6500(config-vlan)#name WISMMANAGEMENT
```

```
CAT6500(config-vlan)#exit
```

```
% Applying VLAN changes may take few minutes. Please wait...
```

Verify if the VLAN is created:

```
CAT6500#sh vl
```

```
00:53:56: %SYS-5-CONFIG_I: Configured from console by consolean
```

VLAN Name	Status	Ports
1 default	active	Gi1/1, Gi1/2, Gi1/3, Gi1/4 Gi1/5, Gi1/6, Gi1/7, Gi1/8
11 WISMSERVICE	active	Gi1/9, Gi1/10
<b>21 WISMMANAGEMENT</b>	<b>active</b>	
1002 fddi-default	act/unsup	
1003 token-ring-default	act/unsup	
1004 fddinet-default	act/unsup	
1005 trnet-default	act/unsup	

VLAN	Type	SAID	MTU	Parent	RingNo	BridgeNo	Stp	BrdgMode	Trans1	Trans2
1	enet	100001	1500	-	-	-	-	-	0	0
11	enet	100011	1500	-	-	-	-	-	0	0
21	enet	100021	1500	-	-	-	-	-	0	0
1002	fddi	101002	1500	-	-	-	-	-	0	0
1003	tr	101003	1500	-	-	-	-	-	0	0
1004	fdnet	101004	1500	-	-	-	ieee	-	0	0
1005	trnet	101005	1500	-	-	-	ibm	-	0	0

```
Remote SPAN VLANs
```

```
Primary Secondary Type Ports
```

Create the SVI on the Catalyst 6500:

```
CAT6500#
```

```

CAT6500(config)#int vlan 21
CAT6500(config-if)#ip add
CAT6500(config-if)#ip address 10.11.21.254 255.255.255.0
CAT6500(config-if)#no shut

```

Do a quick ping test and see if you can ping the WLC IP addresses:

```
CAT6500#ping 10.11.21.10
```

```

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 10.11.21.10, timeout is 2 seconds:
.....
Success rate is 0 percent (0/5)
CAT6500#

```

Check how the interfaces look like before we configure AutoLAG:

```
CAT6500#show int status
```

Port	Name	Status	Vlan	Duplex	Speed	Type
Gil/1		connected	1	full	1000	unknown (4)
Gil/2		connected	1	full	1000	unknown (4)
Gil/3		connected	1	full	1000	unknown (4)

401    Po401 (SD)        -           -
402    Po402 (SD)        -           -

```

Configure AutoLag:

```
CAT6500#
```

```
CAT6500(config)#wism module 1 controller 1 allowed-vlan 11,21
```

```

CAT6500(config)#wism module 1 controller 1 qos-trust dscp
CAT6500(config)#port-channel load-balance src-dst-ip

CAT6500(config)#wism module 1 controller 2 allowed-vlan 11,21
CAT6500(config)#wism module 1 controller 2 qos-trust dscp

```

Check the interface status again:

**CAT6500#show int status**

Port	Name	Status	Vlan	Duplex	Speed	Type
Gil/1		connected	trunk	full	1000	unknown (4)
Gil/2		connected	trunk	full	1000	unknown (4)
Gil/3		connected	trunk	full	1000	unknown (4)
Gil/4		connected	trunk	full	1000	unknown (4)
Gil/5		connected	trunk	full	1000	unknown (4)
Gil/6		connected	trunk	full	1000	unknown (4)
Gil/7		connected	trunk	full	1000	unknown (4)
Gil/8		connected	trunk	full	1000	unknown (4)
Gil/9		connected	11	full	1000	unknown (4)
Gil/10		connected	11	full	1000	unknown (4)

**CAT6500#show ip int brief**

Interface	IP-Address	OK?	Method	Status	Protocol

GigabitEthernet1/2	unassigned	YES	unset	up	up
GigabitEthernet1/3	unassigned	YES	unset	up	up
GigabitEthernet1/4	unassigned	YES	unset	up	up
GigabitEthernet1/5	unassigned	YES	unset	up	up
GigabitEthernet1/6	unassigned	YES	unset	up	up
GigabitEthernet1/7	unassigned	YES	unset	up	up
GigabitEthernet1/8	unassigned	YES	unset	up	up
GigabitEthernet1/9	unassigned	YES	unset	up	up
GigabitEthernet1/10	unassigned	YES	unset	up	up

**CAT6500#show etherchannel summary**

```

Flags: D - down          P - bundled in port-channel
       I - stand-alone  s - suspended
       H - Hot-standby (LACP only)
       R - Layer3       S - Layer2
       U - in use       N - not in use, no aggregation
       f - failed to allocate aggregator

       M - not in use, no aggregation due to minimum links not met
       m - not in use, port not aggregated due to minimum links not met
       u - unsuitable for bundling
       d - default port

       w - waiting to be aggregated
Number of channel-groups in use: 2
Number of aggregators:          2

Group  Port-channel  Protocol    Ports
-----+-----+-----+-----
401    Po401 (SU)      -           Gi1/1 (P)  Gi1/2 (P)  Gi1/3 (P)
                                     Gi1/4 (P)
402    Po402 (SU)      -           Gi1/5 (P)  Gi1/6 (P)  Gi1/7 (P)
                                     Gi1/8 (P)

```

Check if ping is now working:

**CAT6500#ping 10.11.21.10**

```

Type escape sequence to abort.
Sending 5, 100-byte ICMP Echos to 10.11.21.10, timeout is 2 seconds:
!!!!
Success rate is 100 percent (5/5), round-trip min/avg/max = 1/2/8 ms

```

5. Configure load balancing for load balancing based on best practices

```

CAT6500(config)#port-channel load-balance src-dst-ip

```

6. Create a Management VLAN for the WiSM blade on the Cat 6500 (VLAN 21 = 10.11.21.x/24) and do an initial configuration on WLC1 & WLC2.

Use the following IP addresses:

SVI interface = 10.11.21.254/24

WLC1 management interface = 10.11.21.10/24

WLC1 AP-manager interface = 10.11.21.11/24

WLC1 management interface = 10.11.21.20/24

WLC1 AP-manager interface = 10.11.21.21/24

Configure these IP addresses with the initial config setup on both WLC's.

Make sure how to change this IP address after the initial config is done

Initial configure the WLC1:

```
Welcome to the Cisco Wizard Configuration Tool
Use the '-' character to backup
System Name [Cisco_0a:45:ab]: WLC1
Enter Administrative User Name (24 characters max): admin
Enter Administrative Password (24 characters max): *****
Re-enter Administrative Password : *****

Service Interface IP Address Configuration [none][DHCP]:

Management Interface IP Address: 10.11.21.10
Management Interface Netmask: 255.255.255.0
Management Interface Default Router: 10.11.21.254
Management Interface VLAN Identifier (0 = untagged): 21
Management Interface DHCP Server IP Address: 10.11.21.254

AP Transport Mode [layer2][LAYER3]:
AP Manager Interface IP Address: 10.11.21.11

AP-Manager is on Management subnet, using same values
AP Manager Interface DHCP Server (10.11.21.254):

Virtual Gateway IP Address: 1.1.1.1

Mobility/RF Group Name: WiSM-WLC1

Enable Symmetric Mobility Tunneling [yes][NO]:

Network Name (SSID): WiSM-WLC1
Allow Static IP Addresses [YES][no]:

Configure a RADIUS Server now? [YES][no]: no
Warning! The default WLAN security policy requires a RADIUS server.
Please see documentation for more details.

Enter Country Code list (enter 'help' for a list of countries) [US]:

Enable 802.11b Network [YES][no]:
Enable 802.11a Network [YES][no]:
Enable 802.11g Network [YES][no]:
Enable Auto-RF [YES][no]:

Configure a NTP server now? [YES][no]: no
Configure the system time now? [YES][no]: no

Warning! No AP will come up unless the time is set.
Please see documentation for more details.

Configuration correct? If yes, system will save it and reset. [yes][NO]: yes

Configuration saved!
Resetting system with new configuration...
```

Initial configure the WLC2:

```
Welcome to the Cisco Wizard Configuration Tool
```

```
Use the '-' character to backup
System Name [Cisco_0b:77:eb]: WLC2
Enter Administrative User Name (24 characters max): admin
Enter Administrative Password (24 characters max): *****
Re-enter Administrative Password          : *****

Service Interface IP Address Configuration [none][DHCP]:

Management Interface IP Address: 10.11.21.20
Management Interface Netmask: 255.255.255.0
Management Interface Default Router: 10.11.21.254
Management Interface VLAN Identifier (0 = untagged): 21
Management Interface DHCP Server IP Address: 10.11.21.254

AP Transport Mode [layer2][LAYER3]:
AP Manager Interface IP Address: 10.11.21.21

AP-Manager is on Management subnet, using same values
AP Manager Interface DHCP Server (10.11.21.254):

Virtual Gateway IP Address: 1.1.1.1

Mobility/RF Group Name: WiSM-WLC2

Enable Symmetric Mobility Tunneling [yes][NO]:

Network Name (SSID): WiSM-WLC2
Allow Static IP Addresses [YES][no]:

Configure a RADIUS Server now? [YES][no]: no
Warning! The default WLAN security policy requires a RADIUS server.
Please see documentation for more details.

Enter Country Code list (enter 'help' for a list of countries) [US]:

Enable 802.11b Network [YES][no]:
Enable 802.11a Network [YES][no]:
Enable 802.11g Network [YES][no]:
Enable Auto-RF [YES][no]:

Configure a NTP server now? [YES][no]: no
Configure the system time now? [YES][no]: no

Warning! No AP will come up unless the time is set.
Please see documentation for more details.

Configuration correct? If yes, system will save it and reset. [yes][NO]: yes

Configuration saved!
Resetting system with new configuration...
```

7. Make sure that the traffic that is coming from WLC1 and WLC2 is arriving in a untagged form but stills travels trough the Management VLAN (21)

```
CAT6500(config)#wism module 1 controller 1 native-vlan 21
CAT6500(config)#wism module 1 controller 2 native-vlan 21
```

8. Reset the WiSM blade independently from the Cat6500 switch

We can reset an independent blade with the following command:

```
Router#hw-module module 1 reset
```

```
Proceed with reload of module?[confirm]
```

```
% reset issued for module 1
```

```
00:18:00: %C6KPWR-SP-4-DISABLED: power to module in slot 1 set off (Reset)
```

```
00:00:09: DaughterBoard (Centralized Forwarding Card)
```

```
